Web **Further details regarding the website facility and features**

Server Type	The operating system made available for the hosting package.
Domain Aliases	It is possible to attach additional domains to the hosting to act as one.
Sub-Domains	The number of "second level domains" of which the setup will handle, e.g testing.domain.co.uk.
Databases	A convenient way of storing data. MySQL and MS SQL Express are offered.
SSL	Secure Socket Layers - offer a secure area for sensitive material such as payment.
Web Scripting	Websites can contain advanced functions made possible through code than HTML.
FTP Accounts	Additional FTP accounts allow access to specific folders without providing root details.
Web Users	A web user allows a separate smaller sites located under the main site for testing/personal sites.
Java Apps	The servers contain pre-installed applications such as Galleries allowing quick easy installation.
Site Logging	Site logs can show how the site is performing, where and when the hits are received.
Log Analysis	The log files are stored in RAW format with an application these can be read allowing interpretation.
Log to email	The log files can be sent to a set email address allowing easier administration and reference.
Log Rotates	The logs are set to save and create new on a set schedule or reaching a size limit.
Compressed	Compressing logs allows you to save on allotted disk space.

Email **Further details regarding the Electronic-Mail facility and features**

Accounts	The number of email accounts available for the hosting package.
Account Size	The size of individual mailbox sizes.
Redirects	The server can forward mail automatically onto another address.
Responders	It is possible to automatically reply to received emails with a preconfigured email.
Mailing Lists	Mailing lists enable the setup to email a subscribed list of users with a newsletter, etc.
Anti-Spam	Loaded components on the server will handle spam scanning with domain and user level control.
Anti-Virus	Loaded components on the server will handle virus scanning with domain and user level control.

Misc **Any features which do not lie in the categories above**

Log Files	Whether the server can collate log files for the hosted domain.
Log to email	The server is capable of compressing the log files.
Remote Stats	The ability to browse to a web link and access a username/password secured graphical tool.
Custom Docs	When an error occurs such as a page not found a customised page can be displayed rather the standard.
Support	The level of technical support offered with the package, level 1 is email, level 2 is email, phone and live chat.

Optional **Details of additional features which can be added onto the base package**

Sitebuilder	The ability to create and publish new sites on the hosting server following an easy to follow wizard.
FrontPage	Create and publish websites with Microsoft FrontPage on your computer.
SMTP Feed	Direct mail to your mail server rather than passing through a pop server hosted at Internet Central Ltd.
Backup	Backup your files and website to a network storage device securely protected with username and password.
Enhanced Scan	Increase the efficiency and capture rate for spam and viruses with whitelist/blacklist control.
